PROFESSIONAL SUMMARY

Business Intelligence Engineer / Data Analyst with hands-on data engineering experience across the full data lifecycle — from AWS ETL pipelines to SQL-based data warehouses and Power BI dashboards. I work close to the data itself, validating and modeling it before it reaches a report, giving my analytics a stronger technical foundation than dashboard-only work. Background spans SQL, Python, and AWS, with a focus on turning raw operational data into reliable, decision-ready systems.

EXPERIENCE

Data Engineering Intern | AtliQ Technologies

Jun 2026 – Present

- Built a serverless AWS ETL pipeline (S3, Glue, Lambda, DynamoDB) to validate incoming Finance and Sales datasets through built-in quality checks.
- Extended that workflow with a Silver-layer transformation on Azure Databricks and Delta Lake, standardizing and enriching data for analytics.
- Architected an event-driven ingestion system on AWS for a multi-region financial transactions platform, unifying 3 separate Lambda functions into one solution.
- Maintained 97–98% data accuracy at production scale through automated validation across ingested records.
- Added schema evolution handling and real-time alerting to keep the platform resilient against upstream changes.

PROJECTS

Customer Churn Analysis & Prediction | [GitHub](#)

SQL, Python, Power BI

- Engineered an end-to-end churn analytics pipeline across 6,400+ customers, surfacing a 27% overall churn rate — with month-to-month contracts churning at 46.5% versus 2.7% for two-year plans.
- Trained a Random Forest classifier to predict churn risk, flagging 371 at-risk subscribers for proactive retention targeting.
- Designed a dual-page Power BI dashboard identifying competitor pricing and devices as the leading churn driver, accounting for 32% of all churn cases.

Loan Default & Risk Analysis | [GitHub](#)

Power BI, DAX, Dataflow Gateway

- Created a multi-page Power BI dashboard analyzing 250K+ loan records across purpose, employment type, credit score, and demographic segments.
- Identified unemployed applicants defaulting at 3.39% versus 2.36% for part-time workers, revealing risk-tiered default patterns across occupation groups.
- Delivered DAX-driven metrics tracking loan volume and default trends from 2013–2018, capturing swings of up to 2.8% annually.

SQL Server Retail Analytics Warehouse | [GitHub](#)

SQL, Data Warehousing, Data Modeling, ETL Pipelines, SQL Server

- Developed a 3-layer Medallion warehouse integrating 2 upstream sources into a centralized Star Schema.
- Automated ETL with stored procedures, codifying 5+ data quality and validation rules.
- Published 7 Gold-layer analytical views for secure, reusable SQL reporting and BI consumption.
- Standardized 60K+ sales records through cleansing, deduplication, and schema transformation.

SKILLS

Technical: SQL, Power BI (DAX, Power Query), Python, AWS (S3, Glue, Lambda, DynamoDB), Azure Databricks

Data Engineering: ETL/ELT, Data Warehousing, Data Modeling, Star Schema, Data Validation, Data Integration

Analytics: Exploratory Data Analysis (EDA), KPI Development, Business Requirements Gathering, Dashboard Design

Professional: Data Storytelling, Stakeholder Communication, Problem-Solving, Collaboration

EDUCATION

Bachelor of Engineering, Computer Science and Engineering

May 2026

Mar Ephraem College of Engineering and Technology (Anna University), Tamil Nadu, India | CGPA: 8.38/10.0

Relevant Coursework: Data Structures and Algorithms, Object-Oriented Programming, Database Management Systems, Cloud Computing

CERTIFICATIONS

- Complete Data Analyst Bootcamp — Udemy
- Data Analytics Virtual Experience — Deloitte (Forage)
